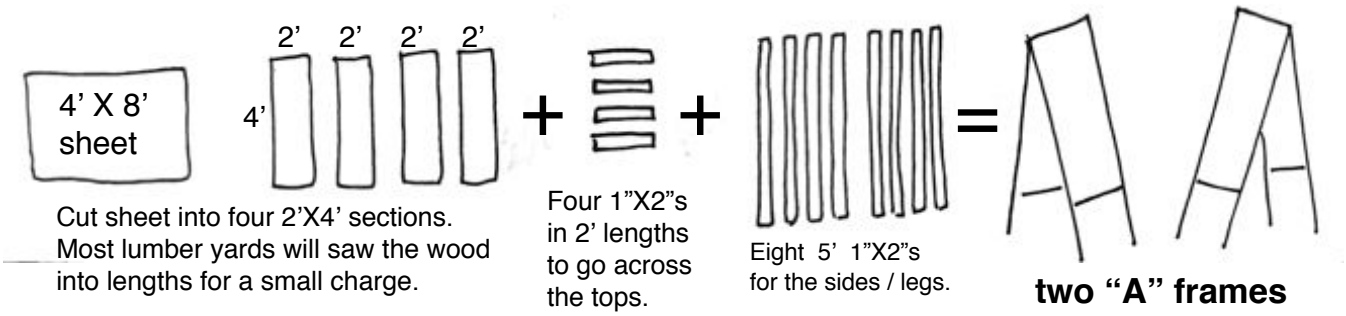
Inexpensive & Easy Display Options • Liz Lyons Friedman

Using one **4 X 8' sheet** of 1/8 mahogany plywood "door skin" or pegboard***** you can build two **"A" frame displays**, one **kiosk** type display **or** one **four panel screen.**

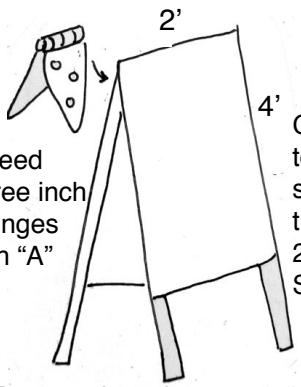


Cut sheet into four 2'X4' sections. Most lumber yards will saw the wood into lengths for a small charge.

Four 1"X2"s in 2' lengths to go across the tops.

Eight 5' 1"X2"s for the sides / legs.

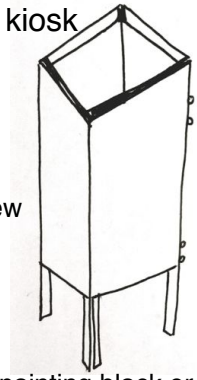
two "A" frames



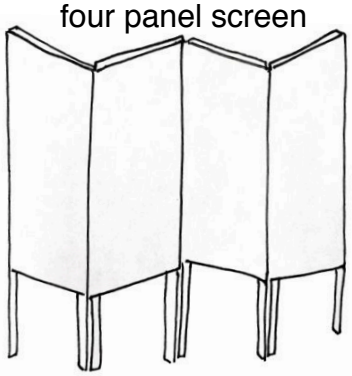
You'll need two, three inch strap hinges for each "A" frame.

Glue the 1x2's to the 2'X4' sections, then nail or screw 2'X4' sections. Sand & paint.

kiosk



four panel screen

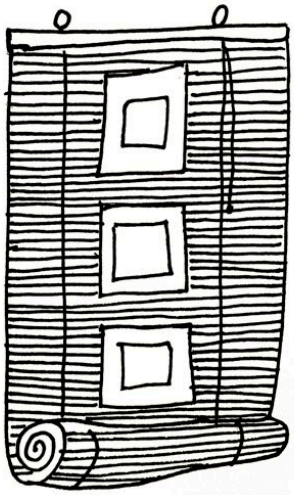


Easy way to connect panels: use screw eyes & gutter nails... use several screw eyes at each connection.

*****Bare pegboard screams "1970", suggest painting black or covering w/ fabric like burlap (wallpaper paste) & paint it. Use an ice pick to find the holes! If you use "door skin" or smooth wood w/o holes, you will need a way to hang your art. Hanging systems from Pro Panels work very well. A light chain attached from leg to leg will keep the "A" frames from spreading. Attach weights to displays with large "S" hooks & straps if using outdoors in a windy area.

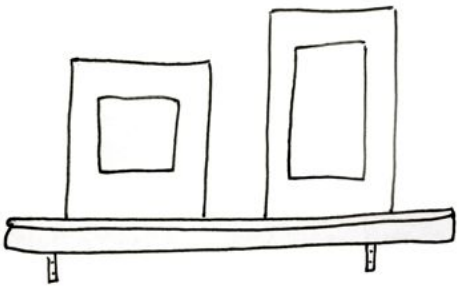
Hide open shelves, divide space, hang light artwork using bamboo or vinyl shades.

Heavier art can be hung by nailing into the shelves behind the shade.

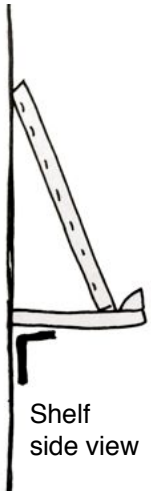


adhesive backed hanging tab: Documounts

Use with a curtain hook to hang matted art from shade.

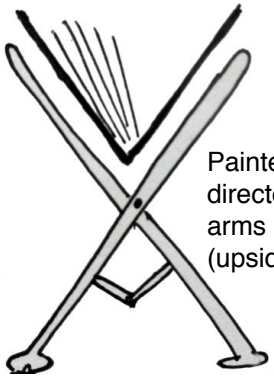


Display shelves: 1X4" wood cut to desired length & 1/4 round moulding. Mount & secure w/ "L" brackets. Great for matted work or canvasses.



Shelf side view

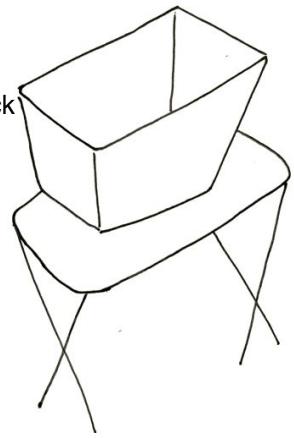
Bins for matted artwork:



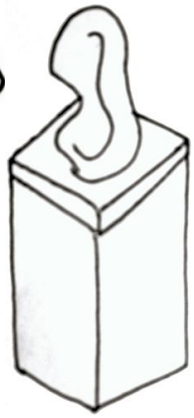
Painted director's chair arms removed (upside down)

Black spray paint

Painted magazine rack



Painted folding TV table



Pedestal: painted (new) corrugated cardboard box with wood on top.
